| Tools & Platforms | Git, GitHub, VS Code, Vercel, Render, Claude, Gemini, ChatGPT, GitHub Copilot, Postman |

## EDUCATION

---

**Bachelor of Computer Applications** June 2025 – Present  
Swarnim Startup & Innovation University, Gandhinagar

**HSC (Higher Secondary Certificate)** March 2025  
Sheth Nanubhai Vidhyamandir, New Naroda, Ahmedabad

## KEY PROJECTS

---

**Personal Portfolio Website** *(React, Vite, Tailwind CSS, GSAP, Framer Motion, Three.js)* [Live](#) [GitHub](#)

A modern, animated personal portfolio built with React and Vite, featuring a Three.js-powered 3D hero section, GSAP and Framer Motion animations, smooth scrolling, and a custom cursor for an immersive browsing experience.

- Built interactive 3D visuals with Three.js and React Three Fiber for an engaging hero section
- Implemented scroll-based and micro-interaction animations using GSAP and Framer Motion
- Structured the site into modular sections (Hero, About, Skills, Experience, Projects, Contact) with reusable components and a custom smooth-scroll experience via Lenis

**Skill Exchange Platform** *(React, React Router, Context API, React Toastify)* [Live](#) [GitHub](#)

A peer-to-peer skill exchange web app where users sign up, list skills they can teach and want to learn, and send exchange requests to connect with other learners, with dashboard, chat, and profile management.

- Built authentication and multi-page routing (Explore, Dashboard, Requests, Chat, Profile) using React Router
- Designed global state management with the Context API to handle users, requests, and exchange data
- Implemented a skill-matching and request system with real-time toast notifications via React Toastify

### **Infinity Coders Enquiry Portal** *(Python, Flask, SQLite, JWT, HTML, CSS, JavaScript)*

**GitHub** ↗

A full-stack student enquiry and lead-management system for a coding institute, with separate Admin and Counselor dashboards, JWT-based authentication, demo scheduling, follow-up tracking, and real-time analytics.

- Built a Flask REST API with JWT authentication, bcrypt password hashing, and role-based access for Admins and Counselors
- Implemented enquiry search/filtering, status tracking (New → Contacted → Interested → Converted), and CSV export
- Added automated email flows (verification, welcome, admin alerts) and an analytics dashboard for stream-wise trends and conversion rates

### **Harsh Patel Terminal Portfolio** *(React, Vite, React Icons, React Toastify, CSS)*

**Live** ↗ **GitHub** ↗

A fully interactive terminal-themed personal portfolio built with React and Vite. Replicates a Unix-style command-line interface where visitors type commands like "about", "skills", and "projects" to explore information, complete with command history and keyboard navigation.

- Built a custom command parser and output renderer supporting multiple commands and structured responses
- Implemented command history navigation using the Up/Down arrow keys, similar to a real shell
- Used React Toastify for in-app notifications and React Icons for terminal UI elements

### **Rick & Morty API Explorer** *(React, React Router, REST API, CSS)*

**Live** ↗ **GitHub** ↗

A multi-page React application that consumes the public Rick and Morty REST API to browse characters, episodes, and locations, with dedicated detail pages and search, all navigable through React Router.

- Built paginated, URL-synced listing pages for Characters, Episodes, and Locations using useEffect and useState
- Implemented client-side routing with React Router for list and detail views, plus a dedicated search page
- Designed reusable character card and navbar components for a consistent browsing experience

## **AWARDS & ACTIVITIES**

---

- Secured 1st position in School Sports activities
- Participated in a Cleaning Awareness program conducted by the school
- Received various certificates for participation in General Knowledge competitions
